MESSAGE

It gives me immense pleasure to know that the Institution of Engineers (India) & School of Management Sciences – Technical Campus are jointly organising a two day seminar on ‘Sources of Planet Energy, Environmental & Disaster Sciences (SPEED-2017) on Dec. 9-10, 2017. This year the Seminar will be mainly focusing on ‘Glacier Melting & it’s Challenges’. As we know rise in average atmospheric temperature is causing melting of glaciers at a faster pace which in turn give rise to mean sea level causing submerging of adjoining land area and causing other calamities like tsunami etc. We are also facing changes in weather cycle. Some of the experts are of the view that melting of glaciers is irreversible process whereas few others say it is reversible process. In order to protect our planet from vagaries of climate change, we have to limit increase in average world temperature in the present century to 2° C.

I congratulate Prof. (Dr.) Bharat Raj Singh, Convener & his entire team who have relentlessly worked to make this Seminar successful. I also compliment Mr. Sharad Singh, CEO & Secretary, School of Management Sciences-Technical Campus, Lucknow for joining hands with the Institution of Engineers (India) for a noble cause.

I extend my best wishes for the grand success of this important & very relevant Seminar which I am sure, will provide an innovative platform for all stake holders to deliberate & exchange of ideas and come out with fruitful recommendations which will go in a long way to save our mother earth.

(V. B. Singh) FIE
